

## portfolio website presentation

## INTRODUCTION

**A Portfolio site is an extension of a freelancers . It provides a connecting way for a potential client to view your work while also allowing to extend your skills and service.**

## OBJECTIVES:-

- ☐ Ultimate purpose of a portfolio website is to provide a way for you to land more clients .
- ☐ At its most basic form a portfolio website provides professional information about an individual or a company and presents a showcase of their own work
- ☐ Portfolio composition is rebalanced frequently to maximize earning
- ☐ To generate earning at minimum risk .

## PROJECT SCOPE

- ☐ In Future expand our website (target 5 district and more )
- ☐ Categories increase
- ☐ Employment increase
- ☐ Website grow and Buisness increase with freelancer

TITLE:-  
FREELANCING  
WITH CLIENTS

# Software Development Life Cycle

Software Development Life Cycle(SDLC) is a systematic process for building software that ensure the quality and correctness of the software built. SDLC process aims to produces high-quality software that meets customer expectation.

The system development should be complete in the pre-defined time frame and cost. SDLC consists of a detailed planned which explains how to plan, built, and maintain specific software.

Every phase of the SDLC life cycle its own process and deliverable that fit into the next phase. SDLC stands for Software Development Life Cycle.

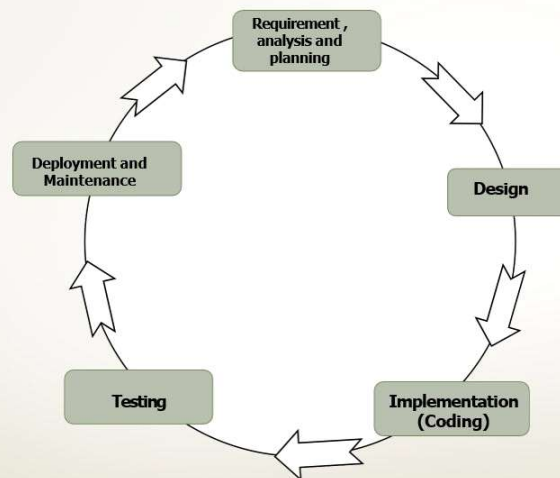

Fig: - Software development life cycle model

## Model :-

### INCREMENTAL MODEL :-

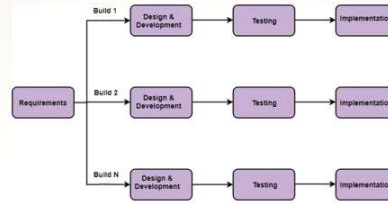

Fig: Incremental Model

ADVANTAGE	DISADVANTAGE
Errors are easy to be recognized	Need for good planning
Easier to test and debug	Total Cost is high.
Simple to manage risk because it handled during its iteration.	Well defined module interfaces are needed.

## Hardware Requirement's

Ram: 512MB or Higher

Hard disk: 20GB or Higher

Processor: Pentium IV or equivalent or higher

Monitor

Mouse

Keyboard

# Software Requirement's

---

1. Operating System: Windows XP/7/8/10.
2. Support: PHP framework 4.0, 3.0.
3. Client-side scripting Language: PHP, HTML, CSS,
4. Database: My SQL DATABASE SYSTEM

## Design

---

Research design can be thought of as the structure of research it is the "glue" that holds all of elements in a research project together. There are many different types of designs that you will be introduced to, often having rather exotic sounding (if not somewhat obscure!) names like 'the non equivalent groups design', the randomized experiment design', 'the regression-discontinuity design'. Definition and key concepts. Generally speaking, it is the process of envisioning and planning the creation of objects, interactive systems, buildings, vehicles, etc. It user-centered, i.e. users are at the heart of the design thinking approach.

The Designing is that face of software development , in which we create a software on paper using the following diagrams.

1. Use case Diagram
2. E-R Diagram
3. Data Flow Diagram

## TECHNOLOGY :-

FRONT END	BACKEND
HTML	MY SQL
CSS	XAMPP (LOCAL HOST SERVER)
JAVASCRIPT/	PHP (SERVER SIDE SCRIPTING LANGUAGE)
FONT AWESOME	XAMPP (LOCAL HOST SERVER)
	Github repository pages to host website

## TESTING :-

Black Box Testing

White Box Testing

Unit Testing

System Testing

Integration Testing

## **Black Box Testing :-**

It is also called as Behavioral/Specification-Based/Input-Output Testing. Black Box Testing is a software testing method in which testers evaluate the functionality of the software under test without looking at the internal code structure.

## **White Box Testing :-**

It is also called as Glass Box, Clear Box, Structural Testing. White Box Testing is based on application's internal code structure. In white-box testing, internal perspectives of the system, as well as programming skills, are used to design test cases. This testing is usually done at the unit level.

## **Unit Testing :-**

Unit testing is done to check whether the individual modules of the source code are working properly. i.e. testing each and every unit of the application separately by the developer in the developer's environment. It Integration Testing: Integration Testing is the process of testing the connectivity or data transfer between a couple of unit tested modules. It is AKA I&T Testing or String Testing. It is subdivided into the Top-Down Approach, Bottom-Up Approach, and Sandwich Approach (Combination of Top-Down and Bottom-Up).

## **Integration Testing :-**

The objective is to take unit tested components and build a program structure that has been dictated by design. Integration testing is testing in which a group of components is combined to produce output.

## **System Testing :-**

It's a black box testing. Testing the fully integrated application this is also called as an end to end scenario testing. To ensure that the software works in all intended target systems. Verify thorough testing of every input in the application to check for desired outputs. Testing of the user's experiences with the application.

## **Maintenance :-**

After the software is delivered comes the maintenance part. Maintenance is done under the following points –

- To remove error from run time.
- To change the environment of the software.
- To add new requirements to the software.
- To update the software.

## ADVANTAGE

- ❑ Professional way to showcase your work.
- ❑ It's a great first impression for client.
- ❑ Increase your visibility and online presence.

”

## APPLICATION

Community: Sharing ideas and resources

Portability: Easier to transport than hard copy versions

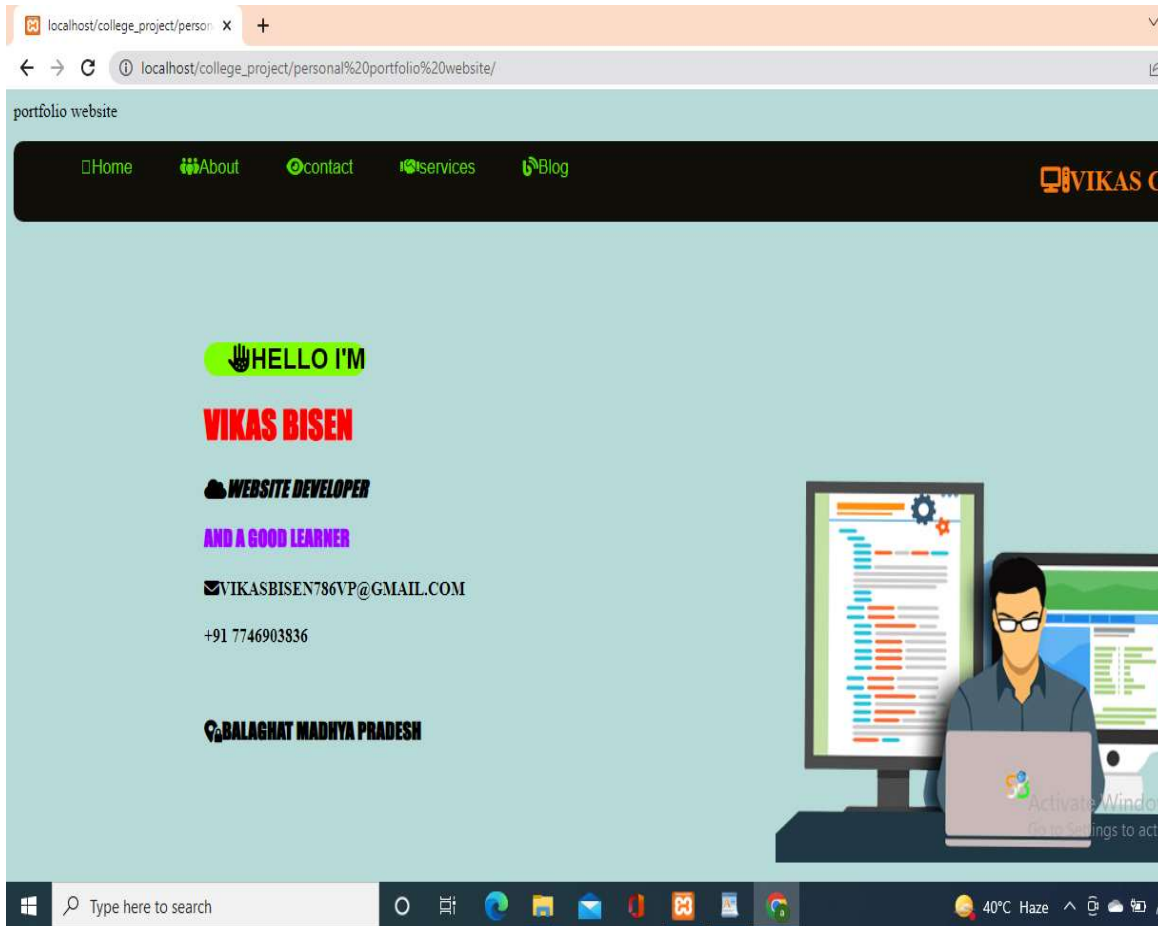

Technology: Digital portfolios are one of the best ways for students to communicate their knowledge and expertise related to their use of technology

Employees take work through our website.

– Leah Busque

“If people are doubting how far you can go, go so far that you can’t hear them anymore.” – Michele Ruiz

“We need to accept that we won’t always make the right decisions, that we’ll screw up royally sometimes – understanding that failure is not the opposite of success, it’s part of success.” – Arianna Huffington

“Write it. Shoot it. Publish it. Crochet it, sauté it, whatever. MAKE.” – Joss Whedon

align: center; color: blue;">GITHUB CLONE FROM  
GITHUB</h2>

<P style="font-size: 30PX; padding-left: 30px; color: aliceblue;"> China's approved GitHub clone, Gitee, has warned users that it will make all existing repositories private pending a mysterious review of their content.

Gitee offers Git and Apache Subversion as a service. But while GitHub has occasionally been banned in China, Gitee was anointed as China's designated open source development hub in 2020, after the nation's Ministry of Industry and Information Technology conducted a bidding process.

The Reg keeps an eye on Gitee and sees a steady stream of blog posts about product and service updates, plus news of open source software in China. The service is sufficiently committed to the

cause of open source to have signed up to mirror Linux Foundation code and is thought to have around eight million users.

The company published news of its code review requirements on a platform called Zhihu.com, a Q&A service similar to US-based Quora.</P>
